Summary

Backend focused full-stack engineer experienced in building and scaling SaaS systems using **TypeScript**, **Java**, and **Go**. Skilled in database design, performance optimization, and API integrations, with hands-on production experience delivering from architecture to deployment in fast-paced environments.

Technical Skills

Backend: Java (Spring Boot), Go, Python (FastAPI), TypeScript (Node.js/Express)
Frontend: React, Next.js, Tailwind CSS, Bootstrap, SCSS, HTML/CSS
Databases: PostgreSQL, MongoDB, MySQL, Redis, RethinkDB
DevOps/Tools: Docker, Git, CI/CD, Figma, VS Code, Render, Kubernetes, EC2 Instance, Fly.io
Integration: Stripe, Clerk, Paystack, PartnerStack
AI/ML & LLMs: OpenAI API, Ollama, DeepSeek integration
Others: Spring Security, GSAP, RabbitMQ, Prisma, Linux

Work Experience

Full-stack Engineer Aug 2025 – Present
TorahAnytime *United States, Remote*

- Migrating a large scale **Node.js** application written in legacy CommonJS to modern standards and transitioned the backend from **RethinkDB** to **MySQL**, improving query performance and long-term maintainability.
- Partnered with the team lead to optimize frontend performance and integrate **weserv.nl** for sharper, faster-loading thumbnails, reducing image load times by **40%**.
- Assisted in configuring **Kubernetes pods** for the development environment, reducing environment drift and cutting new developer setup time by **50%**.
- Wrote a **Go** export program to migrate **6 million records** in **12 minutes**, replacing a Node.js process that took 16 hours for 300k records, a **99%+ reduction** in export time.

CRM Software Developer (Contract, Part-time) Nov 2025 – Present
MyCelebrantApp *New Zealand, Remote*

- Extended a **Go**/**SQLite** SaaS platform from single-ceremony (weddings) to multi-ceremony support, delivering ceremony specific info tabs, task lists, and package filtering. shipped across **GO** backend API and **TypeScript** frontend.
- Built a configurable package template auto-apply system with timing rules (days before/after event), requiring **SQLBoiler** model regeneration and schema migrations, reducing manual ceremony setup time for celebrants.
- Designed and shipped a public file upload flow for ceremony clients, alongside a funeral director invite system supporting up to 4 next-of-kin contacts with server-side validation and **REST API** integration.
- Implemented a celebrant profile customisation suite including drag-and-drop package reordering, logo/header image uploads, and custom footer branding improving profile conversion UX for **100+** active celebrants.

Backend Engineer (Contract) July 2025 – Aug 2025
Scrubbe *United Kingdom, Remote*

- Led development of **Ezra**, an internal AI tool that translates natural language into machine-executable actions, improving developer productivity.
- Designed and implemented **incident management workflows**, including SLA tracking, automated alerts, and structured resolution processes.
- Integrated **third-party SaaS services** to automate incident creation and enhance operational reliability.
- Optimized backend systems for **scalability and performance** through database design, monitoring, and performance tuning.
- Implemented **third-party integrations** (Slack, GitHub Actions, GitLab) to automatically track failed deployments, raise incidents in Slack, and update incident status in real-time.

Full-stack Engineer Jan 2024 – April 2025
Freelance *Ikeja, LA*

- Developed a full-fledged **e-commerce** platform using **React** and **TypeScript (Express.js)**, containerized with **Docker** for containerization.
- Used **Redis** to optimize session management and product caching, improving server performance by **30%**.
- Optimized frontend **caching** to speed up product rendering, improving **UX** and reducing server costs by 60%.
- Prioritized **performance** and scalability, building an optimized solution that saves time and infrastructure costs for the client without compromising quality.

Software Developer Jan 2024 – Mar 2024

The Tann Mann Gaadi *Remote*

- Improved API integration reliability by defining and aligning on shared API contracts with backend engineers.
- Contributed to daily **Scrum** standups, ensuring alignment on deliverables and maintaining consistent progress across cross-functional teams.
- Built **responsive**, pixel-perfect UIs from **Figma**, ensuring visual consistency.

System Automation Engineer May 2024

Freelance *Remote*

- Automated the CLI-based installation of **AI facial recognition and avatar-swapping tools**.
- Streamlined manual setup processes into a single-command script for non-technical users.

Projects

Talewhirl-bsn | *Java, Docker, Spring Boot, PostgreSQL* | **GitHub** Sept 2024 – Dec 2024

- Built **Talewhirl**, an open-source API for a social book platform with secure auth, email verification, and 30+ relational tables
- Documented endpoints with **OpenAPI** and containerized the app using Docker, adding CI/CD for automated deployment.
- Solo developed the entire project, ensuring it's scalable, easy to use, and contributor-friendly.

DocShip CLI | *Go, Docker, Ollama* | **GitHub** May 2025 – ongoing

- Built a CLI tool in **Go** that scans any project folder, detects tech stack, and auto-generates **Dockerfiles**, **docker-compose.yml**, and deployment scripts.
- Using **LLMs** to analyze project files and generate build/test suggestions.

QuorixAi | *OpenAI, TypeScript, Next.js, Clerk* Ongoing

- Created a tool that transforms **AI-generated text** into more human-like, essay-style responses.
- Built with **Next.js + Clerk** for fast onboarding, access control, and great UX.
- Added rate limiting and fair usage policies to ensure smooth scaling.

Future Work & Interests

Upcoming: Building a MongoDB Compass-style cross-platform desktop app using **Go** and **Rust**, with support for multiple databases and developer-focused UX.
Focus Area: AI-powered dev tools, backend infrastructure, API integrations, and performance tooling.
