Summary

Backend-focused software engineer with production experience building data-intensive APIs, and reliable backend workflows. Experienced in database migrations, query optimization, access control, and end-to-end feature delivery across distributed international teams.

Technical Skills

Backend: Java (Spring Boot), Go, Python (FastAPI), TypeScript (Node.js/Express)
Frontend: React, Next.js, Tailwind CSS, Bootstrap, SCSS, HTML/CSS
Databases: PostgreSQL, MongoDB, MySQL, SQLite, ClickHouse, Redis, RethinkDB
DevOps/Tools: Docker, Git, CI/CD, Kubernetes, Linux, AWS EC2, Fly.io, Vercel
Integration: Stripe, Clerk, Paystack, PartnerStack
AI/ML & LLMs: OpenAI API, Ollama, DeepSeek integration
Others: Temporal, tRPC, GORM, SQLBoiler, WebSockets, RabbitMQ, Prisma

Work Experience

Full-stack Engineer Aug 2025 – Present
TorahAnytime *United States, Remote*

Technologies: Node.js, TypeScript, MySQL, ClickHouse, tRPC, Next.js, Go, Kubernetes, Temporal

- Engineered backend services for a speaker publishing and discovery platform, combining **ClickHouse** lecture queries with **MySQL**-backed content management, advanced filtering, and pagination.
- Optimized lecture discovery using **ClickHouse dictionaries**, window functions, and batched queries; implemented faceted filters and eliminated N+1 requests in topic-based recommendations.
- Built speaker self-service workflows for featured classes, uploads, and banner placements, enforcing resource ownership, premium entitlements, and idempotent asset replacement.
- Contributed to migration of a legacy **Node.js** backend from **RethinkDB to MySQL**, improving maintainability and supporting production data workflows.
- Built a **Go** exporter that processed **6 million records in 12 minutes**, replacing a Node.js process that handled 300,000 records in 16 hours.

CRM Software Developer (Contract, Part-time) Nov 2025 – Present
MyCelebrantApp *New Zealand, Remote*

Technologies: Go, SQLite, SQLBoiler, TypeScript, REST APIs

- Engineered an end-to-end **bulk CSV import workflow** for leads and ceremony bookings, including automatic field recognition, resilient date parsing, duplicate detection, row-level validation, and transactional creation of records with package defaults.
- Architected an **embeddable enquiry form** that converts website submissions into structured ceremony records, automating client invitations, notifications, and follow-up workflows.
- Secured public lead-capture workflows with tenant-scoped package validation, subscription enforcement, server-side validation, and IP/form-based rate limiting.
- Extended the SaaS platform to support multiple ceremony types and built configurable template automation, client file uploads, and invitation workflows.

Backend Engineer (Contract) Jul 2025 – Aug 2025
Scrubbe *United Kingdom, Remote*

Technologies: TypeScript, Node.js, Prisma, REST APIs, Slack API, GitHub Actions, GitLab

- Led development of **Ezra**, an internal AI tool translating natural-language requests into executable actions.
- Designed incident-management workflows with SLA tracking, automated alerts, and structured resolution processes.
- Integrated deployment and collaboration services to detect failed builds, create incidents, and update status through Slack.

Full-stack Engineer (Freelance) Jan 2024 – Apr 2025
Independent Clients *Ikeja, Nigeria*

Technologies: React, TypeScript, Express.js, Redis, Docker

- Developed a containerized e-commerce platform with session management and product caching using **Redis**.
- Optimized server-side caching and frontend product delivery, improving performance and reducing infrastructure overhead.

Software Developer Jan 2024 – Mar 2024
The Tann Mann Gaadi *Remote*

Technologies: Frontend development, API integrations, Figma

- Improved integration reliability by aligning frontend implementations with shared API contracts and delivered responsive interfaces from Figma designs.

Projects

Jottaware | *Go, Fiber, PostgreSQL, React, TypeScript, Docker* | **Website** 2026

- Architected and built a **multi-tenant SaaS workspace** for client, project, task, note, time-tracking, and reporting workflows.
- Implemented tenant-scoped APIs, **JWT authentication**, database migrations, scheduled jobs, file uploads, and PDF reporting.
- Built **WebSocket-based client messaging** with read states and notifications; deployed the containerized backend to **Fly.io** and frontend to **Vercel**.

Talewhirl-bsn | *Java, Spring Boot, PostgreSQL, Docker* | **GitHub** Sep 2024 – Dec 2024

- Built an open-source social-book platform API with authentication, email verification, and a relational schema spanning **30+ tables**.
- Documented APIs with **OpenAPI**, containerized the service, and configured CI/CD for automated deployment.

Education & Certifications

New Horizons Computer Learning Centers May 2024 – Oct 2024
Software Engineering (Java Technology) – Certificate *Ikeja, Nigeria*
